# File Sharing

There are different ways of sharing the files that are stored on the network drive. Each method has its own requirements and limitations, so you might have to try all of them to find the most suitable method for yourself.

To see what files and folders are currently shared on your system, please see Applications > Share Manager.

When your friends and visitors click on a published link, the files and folders are presented using the album viewer. For more details about this application, please see Applications > Album > Album Viewer.

# **Public Directory**

Files that are stored in the PUBLIC directory are accessible (read & write) to all users on the network drive. Simply copy a file to the PUBLIC folder and the next time another user logs in, they can view it too. It doesn't matter if the user logs in via web interface or mounts the network drive on the home network, the PUBLIC directory is always accessible.

# **Sharing a Folder**

You can select a folder or a file in the file explorer that you would like to share and use the context menu to choose how it should be shared. You can share it with other users on the network drive or create a public link that even visitors can access.

#### Share by email

This function allows you to share a folder or a file with visitors that do not have a user account on your network drive and send an invitation via e-mail. You can decide how long this public link is accessible.

- 1. Right-click on the folder or file that you would like share to open the context menu.
- 2. Select Share and click Email.

#### Share with group

This function allows you to share a folder with other users on the network drive. You can decide who you would like to share the folder with and if needed also restrict the access to read only.

- 1. Right-click on the folder that you would like share to open the context menu.
- 2. Select Share and click Group.

5. Back in the file explorer, click **Refresh**. The folder is now marked with an icon to indicate that this folder is currently shared.

To stop sharing the folder, use the share manager or follow the same steps as seen above but at step 3, deselect the option **Share this folder** and apply the changes. Back in the file explorer, refresh the content and the icon that previously marked the folder as shared will be removed again.

File sharing in this way can only be done through the web interface. If you mount the

drive on your home network (e.g. Samba) or access it through a FTP client, the shared folders and files will NOT be available.

#### Publish a folder or file

This function allows you to share a folder or a file with visitors that do not have a user account on your network drive. You can decide how long this public link is accessible and if needed also restrict the access to read only.

- 1. Right-click on the folder or file that you would like share to open the context menu.
- 2. Select Share and click Publish.

3. By default, the access rights are set to **Read Only** and the link expires **1 month** later. To change these settings, click on the **Edit** icon.

### **Sharing an Album**

The album helps you to create your own albums using the pictures and media stored on the network drive. You can then share the albums with other users or publish them on the internet for friends that do not have a user account on your network drive.

#### Publish an album

1. Select **ALBUMS** in the album list (do not select one of the albums but the top folder in the list), select the folder that you would like to share in the content window and then click **Share**.

_	3 Album	
_ (= 🗳 🚰 😼	🛛 🔜 🚳 🗎 🔀	] 🛋 🗙 🚊 ,

2. Select Publish this album on the server and click Apply.

	Share Album	
Album	http://mycloud-pro.myakitio.com /album.html?author=admin MyCloud Pro Do not share this album Publish this album on the server (Copy and paste	)
	this HTML into your blog or webpage.) Share this album to other server user <a href="http://mycloud-&lt;br&gt;pro.myakitio.com&lt;br&gt;/album.html?author=admin" target="_blank"><img src="http://mycloud-pro.myakitio.com /dav/album /YWJjZGVmZ2hpamtsbW5vcHFyOQ %3D%3D.jpg?thumbnail&amp; session=bf48667bdceb4c6719b8fe69e793 login=admin"/&gt;</img </a>	,
	Apply Cancel	

- 3. Depending on how you would like to publish this album, you can:
  - $\circ\,$  Copy the URL and post it on Twitter, post it on Facebook or send it to your friends by email.
  - Copy the HTML code and post it on your blog article or webpage. This code will display the cover image of your album and link to the album on your network drive with the same URL as seen on top of this window.

5. The published folder is now marked both in the album list and in the content window.

To stop publishing the album, use the share manager or select it again as seen in step 1. Select **Do not share this album** and click **Apply**.

#### Share and album

1. Select **ALBUMS** in the album list (do not select one of the albums but the top folder in the list), select the folder that you would like to share in the content window and then click **Share**.

2. Select **Share this album to other server user**, place a tick in the box for the users you would like to share the album with and click **Apply**.

	Share Album

To stop publishing the album, use the share manager or select the album again as seen in step 1. Select **Do not share this album** and click **Apply**.

#### Publish a single file

If you would like to share a single file rather than the whole album, you can copy the hyperlink to the file and post or share the link to only the selected file.

- 1. Publish the album with the file that you would like to publish inside it. For more details, see publish and album.
- 2. Open the published link that was created when you published the album. This will open the album viewer.
- 3. Select the file that you would like to share in the content window.
- 4. Click **Link** in the toolbar or right-click on the item and select **Link** from the context menu.
- 5. Depending on how you would like to share this file, you can:
  - Copy the link and post it on Twitter, post it on Facebook or send it to your friends by email.
  - $\circ\,$  Copy the code and post it on your blog article or webpage.

		×
Copy the link below to share the file.		
http://mycloud-pro.myakitio.com/dav/album/YWJjZGVmZ2hpamtsbW5v	cHFy	OQ
Copy the code below and paste it into your website to embed this item. 		

# **Streaming on Home Network**

When your computer or mobile device is connected to the same local network like your network drive, you can stream your media files by making use of the built-in media server and music server.

#### **UPnP Media Server**

For more details about the media server, please see File Management > Media Server.

#### iTunes

For more details about the music server, please see File Management > iTunes.
