

Email

To send e-mail invitations and receive system notifications in your mailbox, set up a SMTP server. If you are using a free e-mail account, check if it supports POP/SMTP to receive and send your mails. If not, ask your internet provider for an account that you can use to send mails via their mail server.

The screenshot shows a window titled "Email" with a back button in the top-left corner. The window contains two main sections:

- SMTP Server Setup:** This section includes four input fields: "SMTP Server", "Port" (with the value "25" entered), "Username", and "Password". Below these fields is a checkbox labeled "SSL".
- System Notification:** This section is preceded by a checkbox. It contains an "Email Address" input field and a "Send a Test Mail" button labeled "Send".

At the bottom of the window, there are two buttons: "Apply" and "Refresh".

When using Gmail from Google, make sure to [allow less secure apps to access your account](#).

| Field | Description |
|--------------------|---|
| SMTP Server | Enter the IP address or domain name of your SMTP mail server (e.g. smtp.gmail.com). |
| Port | By default, the SMTP server uses port 25 . When SSL is enabled, the default port is 465 . Change the port number accordingly if your mail server is using a different port. |
| Username | Enter the username of your email account. |
| Password | Enter the password to your email account. |
| SSL | Select the checkbox to enable a secure SSL connection. Disable this option if your mail server does not support it or if you have problems sending mails. |

| Field | Description |
|----------------------------|--|
| System Notification | Select or deselect the checkbox to enable or disable the system notifications. When enabled, the system will send you an email when certain system events occur. As an example: <ul style="list-style-type: none">• Drive is full (used storage capacity is over 95%).• Drive temperature is high (over 75°C).• Other hard drive related issues. |
| Email Address | Specify the email address where the system notifications will be sent to. |
| Send | Click Send to send a test mail to the above email address in order to check if the SMTP server setup works. |
| Apply | Click Apply to save the changes. |
