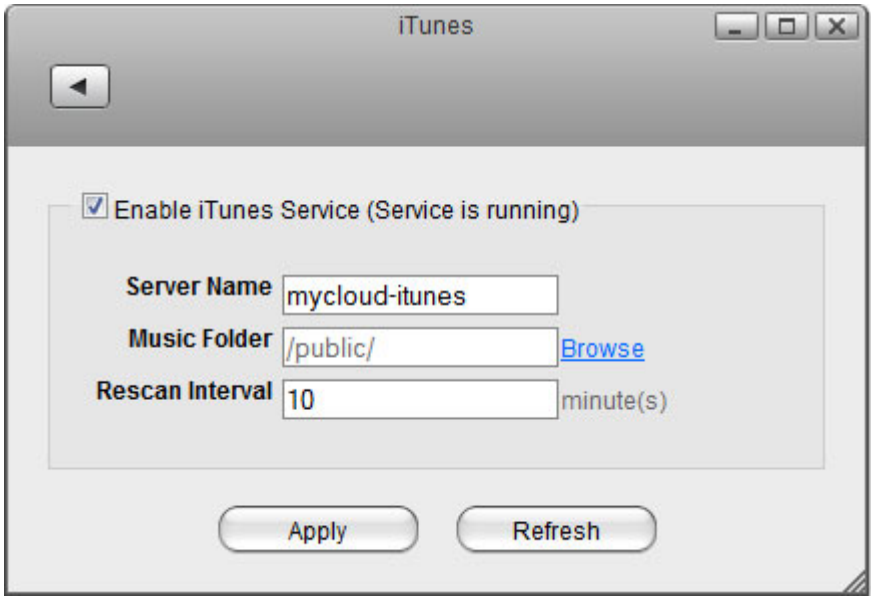
iTunes

The iTunes service streams music files that are located on the NAS to iTunes users on the local network. Simply install iTunes on your PC or Mac and use it to playback the music files on your NAS.



Field	Description
Enable iTunes Service	Select the check-box to enable the iTunes service. The current state of the service is displayed as “Service is stopped” or “Service is running”.
Server Name	Specifies the name of the iTunes server.
Music Folder	Click **Browse** to specify a folder on your NAS to be scanned for music files. Only one directory can be selected but it will also scan the files in the sub-directories.
Rescan Interval	Specifies how often to scan the music folder for new files.
Apply	Click to apply and save the changes.

For more information about how to use the iTunes music server, please see File Management > iTunes.

Following file formats are supported by the iTunes server: ***.mp3, *.m4a, *.m4p, *.ogg, *.flac**.
